Education

Bharati Vidyapeeth (DU) College of Engineering

B.Tech in Information Technology (GPA: 9.94 / 10.0)

Nov 2020 – May 2024

Pune, India

Experience

TCS – Project: Goldman Sachs

Mar 2025 – Present

Software Engineer – Listed Clearing Team

Remote

- Engineered scalable **Java/Spring Boot microservices** for Listed Clearing systems, supporting **low-latency** trade reconciliation and settlement processing for thousands of daily financial transactions.
- Improved backend throughput by ~35% through **concurrent processing** optimizations using Java multithreading, asynchronous workflows, and DB2 query tuning.
- Enhanced resiliency and transactional consistency in distributed financial workflows through **fault-tolerant** and **idempotent backend processing** mechanisms.
- Improved application stability and reduced incident resolution time by ~40% using **JVM analysis**, **Splunk/Grafana monitoring**, and centralized log analysis.
- Increased deployment reliability through **85%+ automated test coverage** with JUnit/Mockito and **CI/CD automation** using Jenkins, Docker, Maven, and Git workflows.

Jio-bp

Jul 2024 – Mar 2025

Graduate Engineer Trainee

Navi Mumbai, India

- Developed backend services for sales and inventory systems using **Java, Spring Boot, and SQL Server**, optimizing legacy business logic and queries to improve API performance and reduce latency.
- Optimized SQL Server stored procedures handling **100K+ daily transactions**, improving database efficiency and overall system throughput for retail operations across multiple outlets.
- Built a distributed backend system for **1700+ retail outlets**, implementing automated connectivity checks, performance tracking, and outage reporting using scheduled and concurrent processing workflows.

Projects

Predictive File System Caching | C++, Python, inotify, Random Forest

Project Repository

- Built predictive caching system for Linux file I/O optimization using real-time file monitoring (inotify) and Random Forest-based access prediction.
- Processed 2.8M+ I/O records to improve cache hit rate and reduce read/write latency via workload-driven prefetching.

Referral System | Java, Spring Boot, PostgreSQL, JUnit, Mockito

Project Repository

- Developed a 3-tier referral backend with REST APIs for referral management, earnings calculation, and idempotent trade-webhook processing in a trading system.
- Designed relational schema and optimized queries/indexing to improve scalability and ensure transactional consistency with unit/integration testing.

Drifty (Open-source Contribution) | Java, Open Source, GitHub

Merged PR

- Extended CLI tool functionality by adding support for downloading Instagram media using yt-dlp.
- Improved input flow, link validation, and output handling to enhance reliability and user experience.

Technical Skills

Languages: Java, Python, C++, SQL (PostgreSQL, IBM DB2, SQL Server)

Backend: Spring Boot, Spring Core, Spring Security, Spring Data JPA, RESTful APIs, SOAP, Microservices

Distributed Systems: Multithreading, Concurrency, Messaging (Kafka), Event-driven Architecture

Databases: SQL Optimization, Query Tuning, Indexing, Transaction Management

DevOps & Tools: Docker, Kubernetes, CI/CD, Maven, Gradle, Git, Unix

Testing & Security: JUnit, Mockito, JWT

Awards & Achievements

Elite Badge, NPTEL (IIT Madras) in Design & Analysis of Algorithms
